## Introduction

The practice of research and innovation has been widely accepted as the most essential component of a developing nation's repertoire of higher education. While research contributes to creation and application of new knowledge, innovation not only incites deeper understanding, but also parallel thinking regarding value creation out of research. Cross-boundary research at intersection of various disciplines led major scientific and societal breakthroughs. Thus, many of today's complex problems ranging from poverty to pandemic are addressed using a multidisciplinary approach.

The Multidisciplinary Research Conclave provides a forum to identify and explore multi-disciplinary research problems and encourage the researchers to be passionate about their research and bring out quality research outputs. The conclave is open to the students, research scholars, faculty and industry personnel to exchange their views on diversified topics in the field of Science, humanities, social science, commerce and management. Thus, the conclave is an excellent opportunity for the researchers to make themselves up-to-date on cutting-edge research innovations and provides a venue to interact with pioneer researchers from academia and industry.

The scientists, educationists, research scholars and students may join and present their research outcomes, observations, findings and innovative ideas.
